Designing synthetic nucleic acid sequences for improved amplification, expression in host cell, by comparing free energy of folding of a starring polynucleotide and a modified polynucleotide having a codon replacement.

Claim 6; Page 66-67;

117pp; English

The present sequence represents a NADPH-dependent aldehyde reductase (C (AR2). The polynucleotide sequence was modified using using the method of the invention. The specification describes a method for designing a CC synthetic polynucleotide. The method comprises providing a starting CC polynucleotide, determining the predicted free energy of folding per base of the polynucleotide, modifying the polynucleotide by replacing a codon comparing the polynucleotide of the replacing a codon comparing the provide a modified polynucleotide, determining comparing this with that of the original polynucleotide. The method is comparing this with that of the original polynucleotide. The method is comparing the protein in a heterologous host. The design and preparation of the synthetic genes are used in application of gene shuffling, directed colution and molecular breeding methods. The method allows expression of comparition and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods. The method allows expression of construction and molecular breeding methods.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC designing a synthetic polynuclectide. The method comprises providing a constraint polynucleotide, determining the predicted free energy of folding constraint provides and constraint provides a codon with a different codon to provide a modified polynucleotide, and comparing this with that of the original complexities, and comparing this with that of the original complexities. The method is useful for developing nucleic acid constraint provides and preparation of the synthetic genes are constraint and modern and modecular constraints and preparation of the synthetic genes are constaint and preparation of the synthetic genes are constaints such as manmals, plants, yeast, fungi and bacteria in corporations such as manmals, plants, yeast, fungi and bacteria in comparation of genes are commercially viable levels, in particular proteins with low yield such as commercially viable levels, in particular proteins with low yield such as constant and eukaryotic hosts at commercially viable levels, in particular proteins with low yield such as constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ફ

```
cc sequence of a Bifidobacterium genome selected from the nucleotide CC sequences given in ABQ81842 and ABQ81843, or a sequence given in CC least 90% identity or which hybridises with the sequence given in CC ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a CC fusion protein, comprising a sequence selected from 1097 sequences given in CC in ABP65258 to ABP66354 ligated in frame to a polynucleotide encoding a CC heterologous polypeptide. (I) has antidiarrheic and antibacterial CC aprobe) is useful for the detection and/or identification of CC aprobe) is useful for the detection and/or identification of CC used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based fermented corpowders, infant formula, pet food or a pharmaceutical composition cc selected from tablets, liquid bacterial suspensions, dried oral composition of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent CC lis useful in DNA arrays or chips to carry out analysis of the Bifidobacterium related nucleotide sequences given in the Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method of preparing high yields of an (R)-hydroxy ester by reducing an alpha-keto ester using a ketoreductase enzyme. The present sequence represents Sporobolomyces salmonicolor ketoreductase, aldehyde reductase II used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                  a probe or primer ior o
in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                        Claim

                                                                                                                                                      A thermostable DNA ligase from a hyperthermophilic archaebacterium, e.g. p. furiosus, catalyses template-dependent ligation at temps. of 30-80 degrees C, and retains its catalytic ability when subjected to temps. of 85-100 degrees C. The ligase functions effectively in the ligase chain reaction without significant blunt-end ligation. (Updated on 25-MAR-2003)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Listing from the present invention but not mentioned further within the specification. N.B. The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the European Patent Office
                                                                                                                                                                                                                                                                    Thermostable DNA ligase from Pyrococcus furiosus - has improved ligation specificity and stability at high temperatures, giving greater efficiency in ligase chain reaction.
                                                                                                             Sequence 561 AA;

                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of a purified thermostable DNA ligase isolated from a hyperthermophilic marine archaebacterium, Pyrococcus furiosus (Pfu). The Pfu DNA ligase catalyses template dependent ligation at temperatures of about 30-80 deg.C. and substantially retains its catalytic ability when subjected to temperatures of 85-100 deg.C. It has an estimated mol. wt. of 50-70 kDa. (Updated on 25-MAR-2003 to correct PF

CC polynucleotide consisting of a sequence encoding an amino acid sequence CC available in electronic form from the US patent office at CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as CC plant breeding markers. The recombinant DNA construct is useful for CC improving plant tolerance to cold, heat, drought, herbicides, extreme CC osmotic conditions, pathogens or pests, for manipulating growth rate in CC plant cells by modification of the cell cycle pathway, for conferring CC increased resistance to plant disease, for producing galactomannan, CC lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake CC or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of invention.

The invention describes a recombinant DNA construct comprising a conjunct polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at confirmation are also useful in physical arrays of molecules and as collective invention are also useful in physical arrays of molecules and as collective improving plant tolerance to cold, heat, drought, herbicides, extreme commotic conditions, pathogens or pests, for manipulating growth rate in collections, pathogens or pests, for particularing growth rate in collection of the cell cycle pathway, for conferring complant cells by modification of the cell cycle pathway, for conferring complant cells by modification. The plant disease, for producing galactomannan, concreased resistance to plant disease, for producing galactomannan, complant growth regulators, for increasing the rate of homologous crecombination in plants, for improving yield by modification of corresponding improved plant growth and development under at least one content. This is the amino acid sequence of a plant full length insert conjugation in the recombinant DNA construct of the

ABU39869
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a cc bacterial infection, for evaluating a compound, such as a polypeptide, cc for the ability to bind a P. aeruginosa nucleic acid, as components of cc including anti-P. aeruginosa drugs, as targets for antibacterial drugs, cc including anti-P. aeruginosa drugs, as templates for recombinant cc production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused cc infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequence ABO67826-cc ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed cc sequence data for this patent did not form part of the printed cc sequence appropriates obtained in electronic format from USPTO at xx

```
CC (1) a vector comprising a promoter operably linked to the interest call (2) a host cell containing the vector; (3) an isolated CC mucleic acid; (4) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the CC antisense nucleic acid; (4) an antibody capable of specifically binding CC antisense nucleic acid; (4) an antibody capable of specifically binding CC proliferation or the activity of a gene in an operon required for CC proliferation; (7) identifying a compound that influences the activity of identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation; (8) CC identifying a gene required for cellular proliferation or the biological compound which the test compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent CC proliferation of the strains is present in a culture or collection of CC strains; or (13) identifying the target of a compound that inhibits the cc proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational CC drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, CC controlled for proliferation of the printed specification, but was obtained con electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid

(1) a vector comprising a promoter operably linked to the nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21-MAR-2002; 2002WO-US009107
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      03-OCT-2002.

                                 ş
                                                                                                                                                                                                             reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies are states involving (III). (II) is cuseful for generating antibodies are states involving (III). (II) is cuseful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abservant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations or cepsonable for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in fraction in the printed specification of the sequence data for this patent did not appear in the printed specification.

Patent No. 6747137

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-12

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR FILING DATE: 1998-08-13

PRIOR FILING DATE: 1998-08-13

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC (AR2). The polynucleotide sequence was modified using using the method of the invention. The specification describes a method for designing a comprhetic polynucleotide. The method comprises providing a starting copynucleotide, determining the predicted free energy of folding per base of the polynucleotide, modifying the polynucleotide by replacing a codon comprises providing a codon copynucleotide to provide a modified polynucleotide, determining comparing this with that of the original polynucleotide. The method is cuseful for developing nucleic acid sequences that enhance expression of the encoded protein in a heterologous host. The design and preparation of the evolution and molecular breeding methods. The method allows expression of genes from various organisms such as mammals, plants, yeast, fungi and copyned copyned such as mammals, plants, yeast, fungi and copyned copyned such as methodine gamma-lyase from P. putida.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a modified NADPH-dependent aldehyde creductase (AR2). The polynucleotide sequence was modified using using the method of the invention. The specification describes a method for certaining anythetic polynucleotide. The method comparises providing a code signing a synthetic polynucleotide. The method comparises providing a codon with a different codon to provide a modified polynucleotide, and comparing the polynucleotide by replacing certaining free energy of folding per base of the modified polynucleotide, and comparing this with that of the original complexity of polynucleotide. The method is useful for developing nucleic acid comparing this with that of the original constant of the synthetic genes are compared to the synthetic genes are been compared to the condition of genes are comparing the method allows expression of genes from various commarcially viable levels, in particular proteins with low yield such as commarcially viable levels, in particular proteins with low yield such as contained to the comparing the condition of the condities and contains the condition of the condition of the condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

CC sequences given in AB081842 and AB081843, or a sequence exhibiting at CC least 90% identity or which hybridises with the sequence spiven in CC AB081842 and AB081843. Also described is a polymucleotide (II) encoding a CC in AB985258 to AB966354 ligated in frame to a polymucleotide encoding a CC detrologous polypeptide. (I) has antidiarrheic and antibacterial CC aprobe) is useful for the detection and/or identification of sequence spiven in a probe) is useful for the detection and/or identification of containing the CC aprobe) is useful for the detection and/or identification of containing the CC aprobe) is useful for the detection and/or identification of containing the CC aprobe) is useful for the detection and/or identification of can be used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotating the carrier is a food composition selected CC bacteria and/or rotating the carrier is a food composition selected CC products, ice-creams, fermented cereal based products, milk based for products, intent formula, pet food or a pharmaceutical composition containing the selected from tablets, liquid bacterial suspensions, dried oral susplement, dry tube feeding or wet tube feeding. CC supplement, wet oral supplement, dry tube feeding or wet tube feeding. CC Expression of the Bifidobacterium gene. AB081844 to AB081850 represent CC Bifidobacterium related nucleotide sequences given in the Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method of preparing high yields of an (R)-hydroxy ester by reducing an alpha-keto ester using a ketoreductase enzyme. The present sequence represents Sporobolomyces salmonicolor ketoreductase, aldehyde reductase II used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   30-JAN-2001;
